

Give answers for the following:

Define:

- 1- Fungi
- 2- Cytoskeleton of a fungal cell
- 3- Karyoplasm of the fungal cell
- 4- Fungal exoenzymes
- 5- Fungal symbiosis
- 6- Polymorphic fungi

Describe structure(s) - chemical composition of:

- 7- List some of the different common fungal cell structures and organelles
- 8- The chemical composition of the fungal cell wall
- 9- The chemical composition of the fungal cell membrane
- 10- The chemical composition of the fungal cell cytoplasm

Describe function(s) of:

- 11- The fungal cell wall
- 12- The fungal cell membrane
- 13- The fungal cell cytoplasm
- 14- The fungal cell nucleoplasm
- 15- The fungal cell endoplasmic reticulum

Are the statements True or False? Write corrections.

- 16- The cytoplasm lies within the nucleus and outside the cell membrane
- 17- The nuclear envelope separates the contents of the cytoplasm from the nucleus

Write a list – Mention types or classes of:

- 18- Fungal body forms
- 19- Type of mycelium of filamentous fungi according to their functions
- 20- Fungal membrane sterols against those of animals and plants
- 21- List the three main components of the fungal cell cytoplasm
- 22- Fungal ribosomes states within the cells
- 23- List some habitat factors on which the growth of fungi depends
- 24- The three major fungal modes of nutrition

Choose the correct:

- 25- The selective barrier surrounding the fungal cell is called:
 - a) Cell membrane
 - b) Cell wall
 - c) Plasma membrane
 - d) a and c
- 26- Among the cytoplasmic inclusions present in the fungal cell cytoplasm are all the following except:
 - a) Nucleus
 - b) Enzymes
 - c) Proteins
 - d) Lipids
- 27- All the following are stages in the aerobic cellular respiration occur inside the fungal mitochondria except:
 - a) Electron transport chain
 - b) Glycolysis
 - c) Citric acid cycle
 - d) Oxidative phosphorylation

Explain the difference:

- 28- Septate and coenocytic types of hyphae
- 29- Endocytosis and exocytosis processes
- 30- Endoplasm and ectoplasm areas of the cytoplasm
- 31- Endophytic and ectophytic saprophytic fungi
- 32- Intracellular and intercellular haustoria of parasitic fungi
- 33- Fragmentation and budding as methods of vegetative reproduction in fungi
- 34- Sporangiospores and conidiospores

35- Rearrange the following events in Somatogamy type of sexual reproduction in fungi:

- 1) Production of haploid mycelia
- 2) Production of haploid basidiospores
- 3) Production of diploid nuclei
- 4) Production of dikaryotic hyphae
